

---

If you're looking for a quality program that will allow you to take your drumming skills to the next level, we've got just the thing. It's called EZdrummer 2 and it's one of the top virtual drumming programs on the market. It's compatible with both Windows and Apple systems, with no need for an expensive software program for either. There are tons of features that make this program stand out from its competitors. For starters, it has a variety of drum kits to make any style of music you want. There are over 4,200 samples to choose from with an additional 88 new ones provided by the makers of this product. You can even customize your own kit if there's something you've always wanted to sample that's not already available! There are also tons of ways to customize each kit you've chosen. You can control how hard or soft each hit is, as well as the type and amount of reverb and other effects that will be added after the hit. This also lets you control how sharp or round the edges of each hit will be. This gives you maximum control over your sounds. There's also a stellar selection of beats to play. You have 50 different types of beats to choose from, including hip-hop, reggae, dubstep, trance, glitch hop and drum & bass. The sounds are all recorded straight off the samples of the kits themselves. These are all made with quality studio equipment that you can really feel when you play them. There are even playlist support for these, so you can store them in different folders or on your computer to pick up later. EZdrummer 2 also features a whopping 5 velocity levels, so you can play your tempos however you want. The program can automatically compensate for any notes that are too fast or too slow, allowing you to play the music exactly the way it's meant to be played. You can also adjust the time signature of each beat or snippet, if they're not already set in the default setting of 4/4. This allows you to play using tempo-sync rhythms with ease! Along with all of this is a full complement of effects bundled right along with it. You'll have access to reverb, delay, distortion, phaser and other effects that result in your sounds being just as great as if you're playing them on a real set of drums. All of the samples have been curated meticulously to ensure that they are suitable for professional use, too! With all of that power under the hood of this program, you'd think it'd be hard to navigate or use. Thankfully, it's not! The interface is clean and easy to use. Drag and drop functionality makes it easy to move around your songs and playlists as well as move from one instrument instrument to another with ease. There's also a toolbar with quick access buttons for the most basic features like playback controls and notes.
